

### Sobraon Street Slope Stabilisation, Sunrise Beach

#### Project summary

Recent geotechnical investigations have detected evidence of slope instability within the parkland adjacent to Sobraon Street. This is due to the loose sandy material and the steep topography of the site.

Council has been closely monitoring the slope for movement and maintained a single lane closure to minimise further movement.

#### Project overview

A design solution to stabilise the slope is being sourced which will minimise the impact to the existing vegetated slope and surrounding areas.

Work will include:

- slope stabilisation
- revegetation following stabilisation
- repairs to the Tingira Crescent stormwater culvert.

These works are vital to maintaining the long-term serviceability of the road and drainage infrastructure at this location.

This project is jointly funded under the Federal Government's Local Roads and Community Infrastructure (LRCI) Program and the Queensland State Government COVID Works for Queensland Program.

#### Traffic and community impacts

Sobraon Street will remain one-way in a south-easterly direction with a 22.5 tonne load limit until the completion of work. This will allow the continuation of garbage services and minimise traffic along the Sobraon Street and Tingira Crescent northern loop.

Low impact design solutions have been selected to minimise community impacts, however nearby residents may experience some additional noise during work.

Residents and businesses will be kept informed about the project and traffic impacts via letterbox drops, email, and social media. Future Project News updates can also be found at [www.noosa.qld.gov.au/wip](http://www.noosa.qld.gov.au/wip).

Your patience during the construction process is appreciated.

#### Project timing

The project is in the procurement phase with work to start as soon as possible after the awarding of tenders.
